

## 2006 Virginia Outdoors Survey

The 2006 Virginia Outdoors Survey was a cooperative project between the Virginia Department of Conservation and Recreation and Virginia Commonwealth University. The survey combines information about individual outdoor recreation activities, state park usage preferences and opinions on natural resources and conservation. Information about the various specific activities is included in the program areas of this 2007 VOP.

The purpose of this survey is to measure the public demand for outdoor recreation areas and facilities generated in Virginia each year. In addition to addressing standard questions pertaining to participation in different types of outdoor recreational activities, the survey also asked, for each activity, how many household members participated, how many times in past year, how much time it took to reach the place where they participated, whether they participated in Virginia or left the state, and whether participation usually occurred at a publicly or privately owned facility. The activity list from which respondents could choose was also expanded in order to develop more comprehensive data on the types of outdoor recreational activities and resources enjoyed by Virginians.

Because of the amount of information covered, the 2006 Virginia Outdoors Survey was a mailed questionnaire. To ensure accuracy of results at both the state and regional level, Virginia was divided into four regions for sampling purposes: the Chesapeake region (Planning Districts 17, 18 and 22), the urban corridor (Planning Districts 8, 15, 16, 19 and 23), the Piedmont region (Planning Districts 9 through 14), and the Mountain region (Planning Districts 1 through 7). Addresses were acquired within each region through a random selection process and questionnaires were mailed. If a household failed to return its questionnaire within two weeks, a postcard reminder was sent. Households not responding within a period of a few months were sent reminder letters, as well as additional survey copies. As a result of these efforts, more than 3,400 valid responses were received. To help ensure validity of the data, the responses were weighted according to 2000 Census data to correspond with population characteristics such as race, income, education, sex, and property ownership for each region. Survey estimates are 95% certain to be within  $\pm 2.0\%$  confidence interval of the actual attitudes of the population at the statewide level. This high level of confidence makes the data an excellent source of information regarding Virginians' preferences and attitudes about outdoor recreation and open space resources. Results and trends from the survey are summarized in Chapter II of the 2007 Virginia Outdoors Plan.
